DETAILED ACTION

Claims 1-55 are pending.

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group 1, claim(s) 1-25, drawn to a drug delivery molecule.

Group 2, claim(s) 26-55, drawn to a method for selectively targeting an endothelial cell proximally located to an anomalous cell, a method of improving circulation, a method of improving vision and a method of improving a health condition, all methods comprising the administration of a compound that specifically binds to a somatostatin type II receptor on an endothelial cell.

The inventions listed as Groups 1 and 2 do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The claims are not unified by a special technical feature because the claims are obvious over the art. For instance, claims 26-28 and 30 are obvious over Hornik et al (US 6,355,613) in view of Woltering et al (US 6,180,082). Hornik et al teach the compound PTR 3205 (column 17, Table 3) as selective for the somatostatin type II receptor and as an anticancer agent for malignancies expressing the somatostatin type 2 receptor subtype. Woltering et al teach that high densities of somatostatin receptor subtype 2 have been found on cells from a wide variety of tumors including endocrine tumors, melanomas, breast carcinomas, Merkel cell tumors, lymphomas, small cell lung carcinomas, gastrointestinal tumors, astrocytomas, gliomas, meningiomas, carcinoid tumors, islet cell tumors, renal cell carcinomas, neuroblastomas, and pheochromocytomas (column 5, lines 7-37). Thus, it would be obvious to administer PTR 3205 to treat endocrine tumors, melanomas, breast carcinomas, Merkel cell tumors, lymphomas, small cell lung carcinomas, gastrointestinal tumors, astrocytomas, gliomas,

meningiomas, carcinoid tumors, islet cell tumors, renal cell carcinomas, neuroblastomas, and pheochromocytomas. Thus, the claims as a whole do not possess a special technical feature and therefore do not make a novel contribution over the art.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
